

## **Inventory Management System**

### **Description:**

This project is a supermarket to sell some goods and products and aims to provide complete comfort to customers. It allows you to organize products, register and follow up on all products and their categories that you deal with. Where you can register an unlimited number of products on a database , and monitor product quantities at any time. Where the store includes many details that need to be saved and continuous follow-up of products and suppliers , and printing the profit report.

---

#### ➤ **Products:**

Products can be added, modified or deleted. its can also be searched by their names.

#### ➤ **Admin:**

Adding product categories and modifying them . adding the supplier and modifying them . creating reports and statistics for each product in the products and making a profit report.

#### ➤ **Client:**

He must be registered in the system to be able to order a specific product. Show list of requests.
